

Work Experience

Frontend Engineer **Grupo Platino** **Jul 2023–Jul 2025**

On-Site

- Led the backend development of CRM systems for multiple companies within the conglomerate, implementing 7 customized systems using .NET and clean architecture principles (SOLID, repository pattern) to ensure maintainable and scalable solutions.
- Integrated the CRM systems with SAP Business One via SAP Service Layer, streamlining data exchange, reducing SAP license costs, and improving operational efficiency.
- Spearheaded the backend design and development of a construction cost control app using .NET for the backend and Next.js for the frontend. Optimized the backend services for speed and scalability, handling complex business logic and data processing.
- Migrated the company's CRM systems and other backend services from VPS to Vercel, improving scalability and deployment efficiency.
- Designed and managed relational databases using PostgreSQL and MySQL, ensuring robust data structures and optimized query performance.
- Collaborated with cross-functional teams to gather requirements, design solutions, and ensure successful project delivery on time.

FullStack Engineer **El Paso Labs** **Jan-2025–May-2026**

Remote

- Working on a partner portal for financial payment processing, helping to enhance merchant applications and transaction handling systems.
- Contributing fresh ideas to the project by refining the Angular frontend, improving performance, and ensuring a seamless user experience.
- Assisting in system design by suggesting architectural improvements and best practices for maintainability.
- Collaborating closely with backend engineers to improve API integration and enhance data processing workflows for financial transactions.
- Leading full-stack development on a fundraising platform built with Next.js, Supabase, and Stripe — delivering features across frontend, backend API (NestJS), and edge functions.
- Designed and implemented the complete disbursement flow for processing payouts to fundraisers, including payment method selection, status tracking, audit trails, and cancellation/restart logic.
- Built Stripe payment integrations including webhook handlers for payout tracking, balance verification, and dispute handling.
- Developed a CRM integration pipeline connecting Webflow forms to Twenty CRM with automated Slack notifications for the sales team.
- Took ownership of production stability and deployments during lead engineer's absence, coordinating releases and monitoring live transactions.
- Implemented server-side paginated data tables, image cropping, real-time data refresh, configurable contact limits, and various platform-wide UI improvements.

Frontend Engineer **Albatros Services** **Jan-2025–May-2026**

Remote

- Developing and maintaining a large-scale routing and ERP system integrated with SAP, building numerous frontend components and features.
- Delivering significant performance optimizations that reduced load times and eliminated wait states, directly improving the end-user experience.
- Leading UI/UX improvements and refactoring efforts across the application to enhance usability and maintainability.
- Building reusable component libraries and implementing consistent design patterns throughout the platform.

- Identifying and resolving bugs across the application while continuously proposing and implementing enhancements that add measurable value to users.

Education and Certifications

- | | |
|--|------------------|
| ● Fundación Mhotivo (Bilingual School) | 2004-2019 |
| ● University Technical degree in app development , Ceutec, Honduras | 2021–2024 |
| ● EF SET English Certificate 74/100 (C2 Proficient) | 2023-2034 |

Technologies and Skills

- Backend Technologies: .NET (C#), Node.js, Express, TypeScript, NestJS
- Frontend: Angular, React, Next.js, Tailwind
- Databases: PostgreSQL, MySQL, MySQLServer
- Cloud/Deployment: Vercel, Docker
- Payments: Stripe (Payouts, Webhooks, Connect)
- AI & Automation: Claude Code, MCP Servers, Prompt Engineering, AI-assisted development
- Methodologies: Agile (Scrum, Kanban), CI/CD
- Architectures & Design: Clean Architecture, Domain-Driven Design, Design Patterns, Microservices
- Tools: Git, GitHub, Jira, Linear, VSCode, Postman, Swagger

Soft Skills

- Strong ownership and accountability
- Effective cross-team communication and coordination
- Fast learner in new technologies and codebases
- Proactive problem-solving and critical thinking
- Detail-oriented with end-to-end system awareness

Languages

- English **Advanced (C2)**
- Spanish **Native**
