To Whom It May Concern,

It is with great enthusiasm that I write this letter of recommendation for Keven Bardales. I have had the privilege of working with Keven for over a year and a half, and I can confidently say that he is one of the most capable, thoughtful, and reliable software engineers I have had the pleasure of collaborating with. I recommend him without reservation.

Based in Honduras, Keven contributed to two demanding and high-stakes initiatives during our time working together. He helped build a product for a major payments processor in the United Kingdom, where the technical bar, regulatory considerations, and reliability requirements left no room for shortcuts. In parallel, he helped incubate a fundraising platform startup in the United States, an environment that demanded the opposite skill set: rapid iteration, ambiguity tolerance, and the ability to ship under pressure. Keven excelled in both, and his ability to move seamlessly between an enterprise fintech context and an early-stage startup speaks volumes about his adaptability and range.

What stands out most about Keven is his attention to detail. He treats his work with genuine care, catching edge cases others miss and consistently producing code that is clean, considered, and built to last. He pairs this with strong communication skills: he asks the right questions, surfaces problems early, and explains his thinking in a way that makes collaboration easy across time zones and teams. His English is excellent, both written and spoken, which made him an effective partner in client-facing discussions and cross-border engineering work.

Beyond his technical skill, Keven is simply an outstanding teammate—conscientious, accountable, and the kind of engineer you want when the work matters and the timelines are tight. We very much hope to work with him again, and I would not hesitate to recommend him for any role that values craftsmanship, accountability, and great communication. Any team would be fortunate to have him.

Sincerely,

Ivan Huerta
